intersil DigiReel® REALTIME CLOCKS

RealTime Clock/Calendars with dual alarms (programmable frequency output X1227 and X1228 only), and on chip oscillator compensation. The X1227 and X1228 are also CPU Supervisor circuits with two polled alarms. The clock and alarm registers allow the clock to operate without loss of accuracy, even during read and write operations. The clock/calendar provides functionality that is controllable and readable through a set of registers. The clock, using a low-cost 32.768kHz crystal input, accurately tracks the time in seconds, minutes, hours, date, day, month and years. 2-wire interface interoperable with 512 x 8 bits of I^{2}C EEprom. The Supervisor circuits come in 4 reset voltages.

APPLICATION SPECIFIC/ INTEGRATED CIRCUITS

Our LCD controllers feature high-performance, low power consumption. These LCD controllers can be used on a variety of CPUs. The product line up supports a wide range of LCD panels, including those from small to large scale and those from monochrome to color.
